

Overwrite task

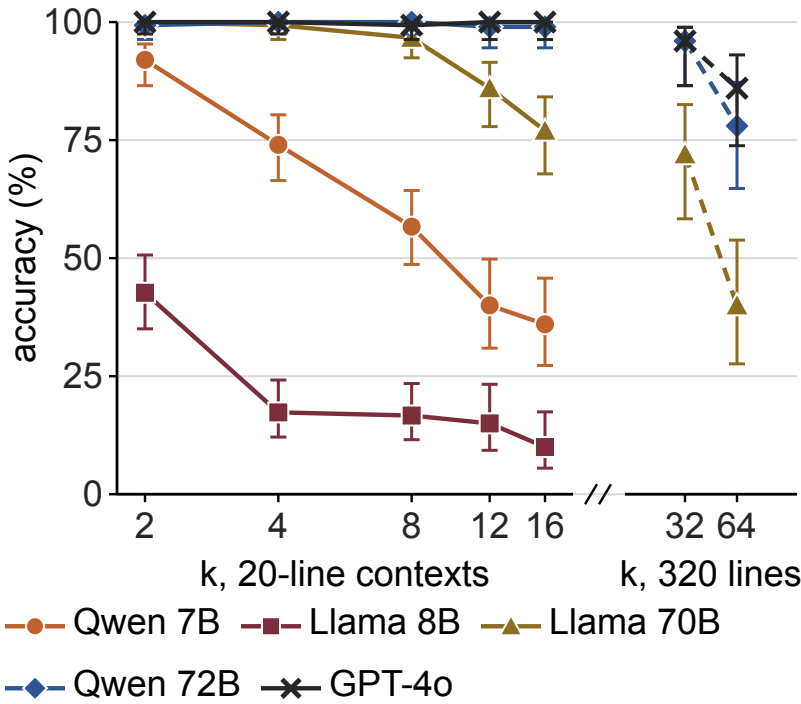

k = number of old values of x (here $k = 2$); other lines assign unrelated variables.

(a) What the model answers
300 per column, all lengths pooled

(b) Scaling with direct answers
accuracy; bars: 95% intervals

$k = 0$ (no rewrites): 100% for all models

(c) Multiple choice hides it
ICF-Bench; acc. 69 vs. 71%
